Simbian®

Transform your SecOps with AI

Transform your SecOps with our AI SOC Agent—enhancing threat intelligence, accelerating response, and optimizing both your strategic and tactical metrics.

Do your top priorities include

Growth
Scaling your SOC to manage increasing investigation workloads, but facing hiring and training challenges?

Automation
Automating alert investigations, response, and threat hunting, but finding SOAR too resource-intensive with constant manual playbook updates?

Reduce cost/noise
Are your analysts wasting too much time on false positives?

SIMBIAN AI SOC AGENT

Simbian's AI SOC Agent **autonomously triages, investigates, and responds** to every alert in your system, combining the best of Simbian's knowledgebase with your business know-how.

- **Unlike SOARs**, there is no need to build and maintain playbooks. The SOC Agent investigates every alert with AI, even new and unknown threats.

- **Unlike Copilots**, the SOC Agent works autonomously, 24/7.

- **Unlike XDRs**, the SOC Agent investigates using data from across your entire environment, using Simbian's extensive ecosystem of 70+ integrations, for higher accuracy.

- **Unlike other emerging AI SOC solutions** Simbian's SOC Agent is complemented by a Threat Intel Agent to ingest and action Threat Intel, and a Threat Hunt Agent that hunts your entire environment based on threat hypotheses. These Agents work together to make SOC investigations much richer than standalone AI SOC solutions.

90%
Alerts resolved automatically

5x

The SOC Agent uses a threat hunt methodology to deeply investigate every alert, correlate other events in the environment, and stitch together the big picture.

WHAT WE DO

Automated Response

The SOC Agent doesn't stop at investigation. It automatically takes containment actions such as quarantining a potentially compromised user if you permit it to

Transparent reasoning

The SOC Agent explains what it did to arrive at the verdict, how and why it did it, so analysts can validate the verdict. The steps are summarized in natural language, so even non-analysts can understand and contribute.

Evolves to new alert types, new tools, changing IT environment

The SOC Agent's methodology enables it to take a first pass at new alert types that neither Simbian nor your SOC have seen.. Simbian's ecosystem of integrations enables it to adapt automatically to new tools in your environment.

Under customer control

Analysts can customize the SOC Agent by feeding their knowledge. This enables the SOC Agent to incorporate business context in its decisions.

Ready for MSSPs and MDRs

The SOC Agent was built with multi-tenancy in mind, so analysts at MSSPs and MDRs can manage multiple clients efficiently from a single console. Read our case study on how the SOC Agent reduced costs 5x for one of our MSSP partners.

"Simbian's platform takes a straightforward approach to solving core problems we see every day in the SOC. The power in the platform, their AI agents, is in its simplicity. They are not adding steps and processes to achieve results. The Security Accelerator platform drives efficiency without sacrificing efficacy. It allows us to shift the role of the analyst; to give them the time to use human insight, because well trained AI that we can review, and audit, is immensely powerful. It sets a whole new bar for security operations."
